

South Queensland Budgerigar Breeders Assn

To the SQBBA Chairperson

Due to the devastating effect Gastric Yeast (*Macrorhabdus*) can have on budgerigars and budgerigar breeding aviaries, I would recommend, for our team, the use of a medication e.g. potassium sorbate etc. to be used 14 days pre and post the National's judging in order to help protect our birds from this disease.

A handwritten signature in black ink, appearing to read "Ron Woodhead B V Sc". The signature is written in a cursive, somewhat stylized script.
